

MAGNETIC STICKERS

APPLICATION

STEP 1 // PREPARATION

Make sure the surface is as smooth as possible (small imperfections can be visible through the sticker afterwards). Repair cracks and holes. If necessary, patch and sand.

Any surface should be made grease-free so that the self-adhesive layer will attach optimal. Degrease by using a blend of lukewarm water and some household vinegar + a dash of detergent.

Rinse with lukewarm water to remove any detergent left behind. Let dry thoroughly before applying the sticker.

TIP: Do not use ammonia for cleaning because it can damage the self adhesive layer of the sticker.

STEP 2 // AIR TUNNELS

By making rolled up stickers flat, air tunnels can occur which can dry up the self-adhesive layer.

Because of those potential air tunnels, apply the sticker within 2 hours after taking out of the package.

STEP 3 // DETERMINE POSITION

Without removing the backing paper, position the sticker on the wall with some tape and mark the edges for having a reference point.

STEP 4 // APPLICATION

Partly remove the upper side of the back foil. Position the sticker in place and press firmly. Carefully keep pulling off the backing paper while working downwards. Keep rubbing the sticker firmly with a soft cloth or a (soft) pressure roller. Especially press down the edges well.

TIP: In the rare case that the sticker doesn't stick well, use ready mixed wallpaper glue for adding more glue-power.*

TIPS

TEMPERATURE

Our magnetic stickers are suitable for indoors (not for outdoors). The surface needs to be at room temperature. **Outer walls may not be too cold otherwise the sticker can come off the wall.**

SUITABLE UNDERGROUNDS

You can apply our magnetic stickers to almost every **smooth** surface such as: metal, wood, glass, carbon, paper, plastic, painted walls & doors, kitchen cabinets,..

Note that all of the above mentioned surfaces need to be degreased with some lukewarm water, household vinegar and a dash of detergent so that the self-adhesive layer can attach well.

TIP: coated or acrylic-painted walls and doors should be roughend-up a bit first with sandpaper for an optimal attach.

Let dry freshly painted walls min. 4 weeks before applying a wall sticker.

REMOVE

The longer the sticker has been stuck to the surface, the more difficult it will be to take it off.

To remove the sticker: you can gently heat it with a hair dryer. This way, it will come off more easily.

Obviously this works better on a clean painted surface than to get it off a wallpapered one.

CARE & USAGE

MAGNETIC STICKER - IN GENERAL

All our magnetic stickers are water-repellent.

// **Clean** with a soft cloth and a dash of washing-up liquid.

TIP: Get rid of stubborn marks by using a melamine sponge + a drip of washing-up liquid + a dash of household vinegar.

MAGNETIC STICKER - CHALKBOARD

// **Write** with soft chalks of any colour. Avoid liquid markers as they can leave marks.

// **Clean** by using a damp cloth + a drip of washing-up liquid. Get rid of stubborn marks using a melamine sponge (magic eraser) + a drip of washing-up liquid + a dash of household vinegar.

When cleaning the chalkboard sticker for the first few times, some black residu can wear off from the chalkboard layer: this will gradually disappear (the wallpaper will remain black).

MAGNETIC STICKER - CHALK MARKER

// **Write** with chalk markers. We recommend the white chalk markers from Legamaster (avoid regular chalks as they leave scratches.)

// **Clean** by using the included melamine sponge + household vinegar and a dash of washing-up liquid.

MAGNETIC STICKER - WHITEBOARD

// **Write** using dry-erase markers.

// **Clean** with a dry / humid cloth.

* **THE BELOW RECOMMENDED PASTES** are available at professional paint and wallpaper stores and on our website.

BE & NL: Bison of Perfax;
wand&klaar behanglijm voor textiel & vinyl

FR: Metylan Ovalit TM;
colle prête à l'emploi pour textile et vinyl
